

Aluminum heatsink

Smaller heat sink that was created primarily for two TO-92 caps with matched transistors, to have the same heat curve.

The lower wings are clamped so that the transistors are back to back. Feel free to use heat-conducting glue and reinforce the attachment with a small piece of shrink tubing.

The goods can be easily bent according to the small chamfered "tags". It can also be supplemented with a TO-220 capsule.

It is fine to just mount on a piece of TO-92 or even a metal capsule like TO-18, to get better heat dissipation.

Fits capsule: TO-92 (2 pcs back to back), TO-18 (1 pcs) , TO-220

Heat resistance: 60°C/W

Material: aluminium, 0,7 mm

Surface: blank

Size: H 26 mm x B 15 mm

RoHS Compliant: Yes

Model/part-no: KYL-STH
